

C-2. PdMO Charter

Corporate Function Group: Section 2 Product Design & Management Office

C-2. PdMO Charter | Corporate Function Group: Section 2 | Product Design & Management Office

1. Mission Statement

To eliminate inconsistencies between technology and business, embedding the "correct answer for the customer" into engineering. To define and audit not only the technical "How" but also the business "What" and "Why," preventing deliverables from diverging from customer requirements.

2. Core Responsibilities

Architecture Governance

- Strict Standardization:** Authority to reject the adoption of any technology outside the organization's standard stack (e.g., Next.js, Supabase) unless a clear reason and alternative comparison (RFC) are provided.
- Optimization of Tech Selection:** Eliminate choices based on temporary trends or personal preferences, prioritizing long-term operational costs and scalability.

Traceability

- Mandatory Requirement Linking:** Require that all implemented features and designs be explicitly linked to specific business requirements (in the customer's words). "Developing for the sake of developing" is strictly prohibited.

Feasibility & Quality Audit

- Veto Power:** Authority to order a rewrite (plan revision) if the schedule presented by C-3 (PMO) is judged to be technically unfeasible.
- Debt Management:** Authority to prioritize debt repayment tasks in the schedule if technical debt exceeds acceptable limits.

3. Meeting Cadence

Meeting Name	Frequency / Duration	Purpose & Rules
Weekly Architecture Review	Weekly 15 min (1on1 / Squad)	Purpose: Health check of design direction and early detection of technical blockers. Rules: No detailed code reviews; focus strictly on "Design Direction" and "Validity of Estimation."
Design Gate (Approval)	Per Milestone (Before Epic Start)	Purpose: Design approval before starting an Epic. Rules: Engineers must not write code until a Sign-off is issued by C-3 (PMO) and PdMO.

4. Reporting Protocol

- A. Weekly Tech Check Format:** A progress and risk report at the Epic level, submitted during the weekly review. (Design Integrity Indicator: On Track, Needs Modification, Critical Blocker).
- B. Design Approval Request:** The submission package required to undergo the Epic start examination (Design Gate). The following artifacts must be submitted as a set:
 - Design Approval Cover
 - Requirement List
 - Function List
 - Architecture/Design Doc.

5. Key Metrics & Artifacts

- KPIs:** Rework Rate (Goal: close to zero), Estimation Accuracy (Evaluate divergence).
- Artifacts:** ADR (Architecture Decision Record), Approval Request Package.

6. Critical Success Factor

- "Clarify and Achieve Requirements":** Do not create documents for the sake of creating documents; focus on "consensus building to prevent rework."
- Derive a realistic and sustainable design that matches the functions, timeline, and costs required by the client.

1. Mission Statement

To eliminate inconsistencies between technology and business, embedding the "correct answer for the customer" into engineering. To define and audit not only the technical "How" but also the business "What" and "Why," preventing deliverables from diverging from customer requirements.

2. Core Responsibilities

Architecture Governance

- Strict Standardization:** Authority to reject the adoption of any technology outside the organization's standard stack (e.g., Next.js, Supabase) unless a clear reason and alternative comparison (RFC) are provided.
- Optimization of Tech Selection:** Eliminate choices based on temporary trends or personal preferences, prioritizing long-term operational costs and scalability.

- Mandatory Requirement Linking:** Require that all implemented features and designs be explicitly linked to specific business requirements (in the customer's words). "Developing for the sake of developing" is strictly prohibited.

Feasibility & Quality Audit

- **Veto Power:** Authority to order a rewrite (plan revision) if the schedule presented by C-3 (PMO) is judged to be technically unfeasible.
- **Debt Management:** Authority to prioritize debt repayment tasks in the schedule if technical debt exceeds acceptable limits.

3. Meeting Cadence

Meeting Name	Frequency / Duration	Purpose & Rules
Weekly Architecture Review	Weekly 15 min (1on1 / Squad)	Purpose: Health check of design direction and early detection of technical blockers. **Rules**: No detailed code reviews; focus strictly on "Design Direction" and "Validity of Estimation."
Design Gate (Approval)	Per Milestone (Before Epic Start)	Purpose: Design approval before starting an Epic. **Rules**: Engineers must not write code until a Sign-off is issued by C-3 (PMO) and PdMO.

4. Reporting Protocol

To visualize project health, reporting using the following formats is mandatory.

A. Weekly Tech Check Format

A progress and risk report at the Epic level, submitted during the weekly review.

[Template] Weekly Tech Check

Target Epic: [Epic Name/ID] Tech Lead: [Name]

Design Integrity Indicator: ● On Track: Proceeding as designed. ● Needs Modification: Design change required (due to requirements or implementation reasons). ● Critical Blocker: Implementation within the period is impossible / Technical feasibility is significantly low.

Change Requests / Blockers:

- Client-driven: [Content and Scope of Impact]
- Implementation/Tech-driven: [Content and Technical Background]

Related ADRs: NOTE, ADRs are stored in the GitHub meta repository. [ADR-00X: Link to Title]

B. Design Approval Request

The submission package required to undergo the Epic start examination (Design Gate). The following artifacts must be submitted as a set.

1. **Design Approval Cover** (Overview)
2. **Requirement List** (Customer Requirements)
3. **Function List** (Functional Specifications)
4. **Architecture/Design Doc** (Design Document)

5. Key Metrics & Artifacts

Key Performance Indicators (KPIs)

- **Rework Rate:** The percentage of correction work caused by insufficient requirement definition or design errors. The primary mission is to bring this close to zero.
- **Estimation Accuracy:** The difference between planned and actuals per Epic/Task. Evaluate whether the causes of divergence are analyzed and reflected in the next estimation.

Key Artifacts

- **Architecture Decision Record (ADR):** A design decision record including subdomain analysis, technology selection, cost estimation, and comparison of alternatives.
- **Approval Request Package:** A complete set of design approval applications based on the prescribed format.

6. Critical Success Factor

- **"Clarify and Achieve Requirements"**
- Do not create documents for the sake of creating documents; focus on "consensus building to prevent rework."
- Derive a realistic and sustainable design that matches the functions, timeline, and costs required by the client.

Appendix: Design Approval Request Template

Requirement List Purpose: To fix "Who," "What," and "Why" is required, preventing "he said, she said" disputes.

ID	Date	Requester	User Voice (Requirement)	Is Optional?	Original Source	Func ID
REQ-001	202X/11/01	Sales Mgr A	I want users to be able to register daily reports from smartphones because there is high demand for input while out of office.	Y	[Teams]	FUNC-01, 02
REQ-002	202X/11/05	CS Rep B	I want to cite past history when registering to reduce the effort of input.	N	[Meeting Rec Link]	FUNC-03
